

Quality Assurance Engineer

TruMedia Measurement Ltd. (www.tru-media.com) is looking for a highly motivated individual to join its development team and design and implement an end-to-end QA infrastructure. In this position the individual will be in charge of developing testing methodology and tools for TruMedia's strategic assets. On the one end, the QA infrastructure will support testing TruMedia's advanced audience measurement devices. On the other end, it will enable testing of TruMedia's Portal, which contains various backend processing and client facing state of the art BI.

Technology Description:

TruMedia is a leading provider of real-time, automated audience measurement and targeted advertising solutions for the out-of-home display industry. It's proprietary video analytics technology measures visual attention towards digital signs, kiosks, TV monitors, branded fixtures, display windows, end-caps and in-store product displays. The company's solutions accurately track exposure to media and advertising and can be used to proactively change content.

Position Description:

- Reporting to VP R&D
- Design and develop the company's testing and quality assurance methodology.
- Design and develop a framework to run end-to-end solution tests, starting from end device and ending at the web based BI analytics system.
- Design and develop automatic tests.
- Work with developers to integrate QA methodology as in inherent part of the development process.
- Interfacing with algorithms, support and marketing teams to ensure correct implementation in the product which meets the customer's requirements
- Work with global clients
